

Having described the invention, what is claimed for
Letters Patent follows:

1. A tableware clip-on device comprising:

a C-ring adapted to grip an edge of tableware, the C-
ring integral with a shaft extending away from a back end
of the C-ring, the shaft connected to a ball at a point
distal from the C-ring;

a partially circular cap adapted to movably grip the
ball, the circular cap supporting a T-bar on an exterior
surface distal from an opening between a pair of ends on
the circular cap; and

the T-bar supporting a pair of spreadable lips
adapted to hold an ornament or name card so that the
ornament or name card is attached by the C-ring to the
tableware.

2. The tableware clip-on device according to Claim 1 wherein
the ball is supported by an axially mounted pin attached at one
end of the shaft.

3. The tableware clip-on device according to Claim 1 wherein
the C-ring, shaft T-bar and spreadable lips are made from a
molded high strength polymer.

4. A dinner plate clip-on device comprising:

a C-ring adapted to grip an edge of the dinner plate,
the C-ring integral with a rearwardly extending shaft, a

distal end of the shaft connected to a ball;

a means for movably gripping the ball and supporting a shelf; and

a means for displaying an ornament attached to the shelf.

5. The dinner plate clip-on device according to Claim 4 wherein the means for movably gripping the ball is a frictionally engaging partial circular member.

6. The dinner plate clip-on device according to Claim 4 wherein the means for displaying an ornament is a clamping device mounted on the shelf.
